MM74HCT08 Quad 2-Input AND Gate

General Description

Ordering Code:

The MM74HCT08 is a logic function fabricated by using advanced silicon-gate CMOS technology which provides the inherent benefits of CMOS—low quiescent power and wide power supply range. This device is input and output characteristic and pinout compatible with standard 74LS logic families. All inputs are protected from static discharge damage by internal diodes to V_{CC} and ground.

MM74HCT devices are intended to interface between TTL and NMOS components and standard CMOS devices. These parts are also plug-in replacements for LS-TTL devices and can be used to reduce power consumption in existing designs.

Features

- TTL, LS pin-out and threshold compatible
- Fast switching: t_{PLH}, t_{PHL} = 12 ns (typ)
- Low power: 10 µW at DC
- High fan-out, 10 LS-TTL loads
