

Smoke detector

Student: Zaibi Alaeddine Grupa:1221F

Introducere

Smoke detector is typically as an indicator of fire. Commercial smoke detectors issue a signal to a fire alarm control panel as part of a fire alarm system. Household smoke detectors, also known as smoke alarms, generally issue an audible or visual alarm from the detector itself this device is useful to help you and family Safer Without a smoke detector in your home or business, a fire can catch you by surprise, and the unthinkable could happen. Having a reliable smoke detector installed in your home or business means the difference between getting out safely and getting injured or even dying in a fire

Descriere generală

the projet consist to mesure if the smoke have reached the smoke threshold (the level that must be reached for an effect to be produced)if the the smoke have reached 500 the buzzer and the red LED will turn on if not just the green LED will stay on

==== Schema Bloc

Hardware Design

List of components: - Arduino Uno -MQ2 sensor -Buzzer -Red Led -green Led -Resistor -jumper wires

Software Design

the development environment that i used is Arduino IDE 1.8.19 functions used:-tone() is function that generate a wave of the specified frequency on a pin which the buzzer is connected to this pin - noTone() function which stop the generation of a square wave caused by tone() has no effect if there is no tone being generated

Rezultate Obținute

the video of the experience [test.rar](#)

Concluzii

The whole project was an interesting experience the most important thing the practical side being the first project of this type dealing with arduino and other component and how it connects with each other that was a good experience finally i could say that i was satisfied with the results at the end

Download

you can download the project from here : [projet_arduino.rar](#)
