Human Follower Robot

Name: Tanase Paul-Gabriel

Group: 1221 A

Faculty: FILS

Introducere

Prezentarea pe scurt a proiectului:

```
Arduino Human Following Robot is a 4-wheeled robot car meant for education
and entertainment purposes.
```

When it is turned on, it will attempt to scan using a motion sensor combined with two IR sensors to determine the closest moving object next to him (in this case, a human hand). After the target is acquired, it will start following it until the object stops.

Descriere generală

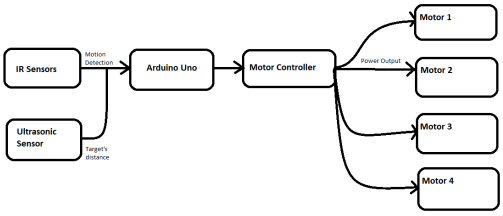
```
Arduino Human Following Robot is a 4-wheeled robot car meant for education
and entertainment purposes.
```

When it is turned on, it will attempt to scan using a motion sensor combined with two IR sensors to determine the closest moving object next to him (in this case, a human hand). After the target is acquired, it will start following it until the object stops.

```
The object scanning is done doing a process similar to that of sonars.
```

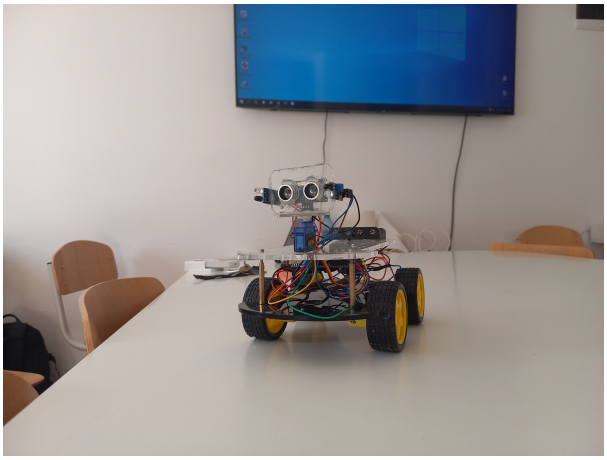
When the robot starts, it's “head” mounted on a servo motor will start rotating, scanning the surrounding enviroment trying to determine the closest object in front of him which emits infrared radiation. once both of the two IR sensors sense the target, the ultrasonic sensor will start pinging the object constatly to measure it's distance. Taking the angle of the servomotor and the distance obtained from the ultrasonic sensor, the motor controler then outputs the power for each of the 4 gear motors to head for the followed object. Once a certain distance treshold is reached (e.g. the robot gets too close or the object ran out of the sensor range) the car will cease it's movement.

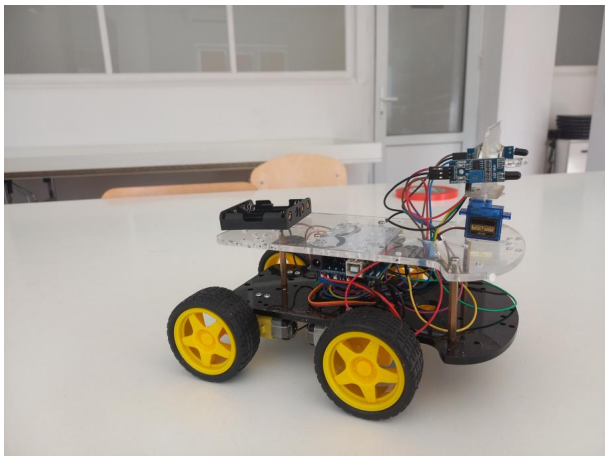
O schemă bloc cu toate modulele proiectului vostru, atât software cât şi hardware însoţită de o descriere a acestora precum şi a modului în care interacţionează.



Schemă bloc:

Poze robot:



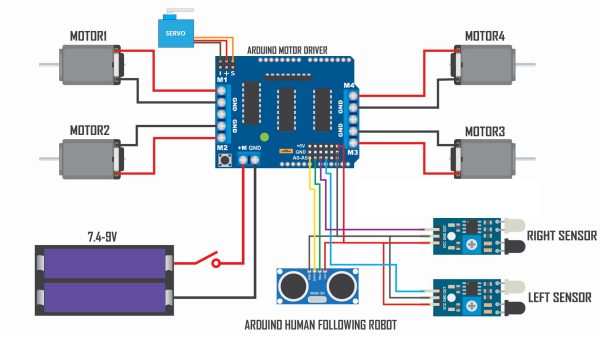


Hardware Design

Lista Piese:

1. Arduino Uno R3
2. 4 Motoare
3. 1 servomotor
4. 1 Arduino Motor Controller
5. 2 senzori IR
6. Jumper Wires

7. 2 Li-Ion Battery *



* Couldn't find Li-ion batteries. Replaced with a 9V battery

Software Design

Descrierea codului aplicaţiei (firmware):

```
Mediu de dezvoltare: **ArduinoIDE**

Librarii folosite: **NewPing**,**Servo**,**AFMotor**
```

Cod:

```
#include<NewPing.h>
#include<Servo.h>
#include<AFMotor.h>

#define RIGHT A2              // Right IR sensor connected to analog pin A2
of Arduino Uno:
#define LEFT A3               // Left IR sensor connected to analog pin A3
of Arduino Uno:
#define TRIGGER_PIN A1        // Trigger pin connected to analog pin A1 of
Arduino Uno:
#define ECHO_PIN A0           // Echo pin connected to analog pin A0 of

```

Rezultate Obţinute

Care au fost rezultatele obţinute în urma realizării proiectului vostru.

Concluzii

Download

Resurse proiect

O arhivă (sau mai multe dacă este cazul) cu fişierele obţinute în urma realizării proiectului: surse, scheme, etc. Un fişier README, un ChangeLog, un script de compilare şi copiere automată pe uC crează întotdeauna o impresie bună .

Fişierele se încarcă pe wiki folosind facilitatea **Add Images or other files**. Namespace-ul în care se încarcă fişierele este de tipul **:pm:prj20??:c?** sau **:pm:prj20??:c?:nume_student** (dacă este cazul). **Exemplu:** Dumitru Alin, 331CC → **:pm:prj2009:cc:dumitru_alin**.

Jurnal

Puteți avea și o secțiune de jurnal în care să poată urmări asistentul de proiect progresul proiectului.
