

# Classic induction

Goal: prove  $\forall n \in \mathbb{N}, P(n)$

**Base case:** prove  $P(0)$

**Induction step:** prove  $P(n) \Rightarrow P(n + 1)$

# Structural induction recipe

Prove **unary** properties:  $P(x)$

1. For each **null constructor**,  $C:T$ , prove **base case**:  $P(C)$
2. For each **external constructor**,  $E:A_1 \times A_2 \times \dots \times A_n \rightarrow T$ , prove **base case**:  
 $P(E(a_1, \dots, a_n))$
3. For each **internal constructor**,  $I:T \times T \times \dots \times T \times A_1 \times A_2 \times \dots \times A_m \rightarrow T$ :  
$$I : \underbrace{T \times T \times \dots \times T}_{n} \times A_1 \times A_2 \times \dots \times A_m \rightarrow T$$
  - a) assume  $P(t_1), P(t_2), \dots, P(t_n)$
  - b) prove  $P(I(t_1, t_2, \dots, t_n, a_1, a_2, \dots, a_m))$
